RESEARCH PROFILE	I study how training objectives shape what machine-learning models learn, and when good predictive performance guarantees recovery of underlying structure . My research combines mathematical theory with controlled experiments, focusing on causal representation learning, multimodal learning, and foundation models.		
RESEARCH INTERESTS	Multimodal learning; vision-language models; identifiable representation learning; learning objectives for foundation models.		
EDUCATION	PhD Candidate in Computer Science <i>Adelaide University</i>	Sep 2023–Present (Expected completion: June 2027)	
	Supervisors: Prof. Javen Qinfeng Shi (principal) and Dr Zhen Zhang Publications: 6 papers across ICML, NeurIPS, ICLR, and ECCV; 3 as first or co-first author , including a NeurIPS Spotlight .		
	M.Sc. in Instrument Science and Technology <i>Wuhan University of Technology</i>	Sep 2016–Jun 2019	
	B.Eng. in Measurement and Control Technology and Instrument <i>Wuhan University of Technology</i>	Sep 2012–Jun 2016

PREPRINTS	[1] An Identifiability Theory of Masked Prediction: Mode Blindness and Mask Schedules. Cai, Y. and Shi, J. Q. arXiv:2608.01383, 2026.		
INVITED TALKS	Understanding Multimodal Contrastive Learning through Two Lenses Online invited talk, <i>Vision & Sensing Lab, Technion</i> Online invited talk, <i>EML, Helmholtz Munich</i>	Jul 2026	

HONORS & AWARDS	D. R. Stranks Travelling Fellowship	Jun 2026
	NeurIPS Scholar Award	Oct 2025
	University of Adelaide Research Scholarship	Sep 2023
	Outstanding Graduate, Wuhan University of Technology	Jun 2019
TEACHING EXPERIENCE	<i>Adelaide University</i> (Formerly the University of Adelaide)	
	Teaching Assistant, <i>Programming for Artificial Intelligence</i>	Semester 2, 2026
	Teaching Assistant, <i>Neural Networks and Deep Learning</i>	Semester 1, 2026
	Guest Lecturer & Head Tutor, <i>Statistical Machine Learning</i> Delivered a guest lecture on vision-language modeling and coordinated the tutor team.	Semester 2, 2025
	Teaching Assistant, <i>Using Machine Learning Tools</i> Developed automated scripts for efficient and consistent assignment marking.	Trimester 2, 2025
	Teaching Assistant, <i>Concepts in AI and Machine Learning</i>	Semester 1, 2025
ACADEMIC SERVICE	Conference reviewer: AAAI 2027; NeurIPS 2026; ICML 2026; ICLR 2026, 2027.	
	Journal reviewer: Transactions on Machine Learning Research (TMLR).	
VISITING RESEARCH	Visiting Student Researcher	May 2018–Sep 2018
	<i>California PATH, UC Berkeley</i> Conducted research on visual-perception algorithms for autonomous driving, including model development and experimental evaluation.	
TECHNICAL EXPERTISE	Methods: identifiability analysis, latent-variable modeling, population-objective analysis, representation geometry, probing, controlled experimentation, and benchmark design.	
	Software: Python, PyTorch, C/C++, Linux, and Git.	
	Languages: Mandarin Chinese (native); English (professional working proficiency).
